

Personal X-Ray Protection – Portfolio IPL 2016/1 PPE

Valid July 1st, 2016

MAVIG

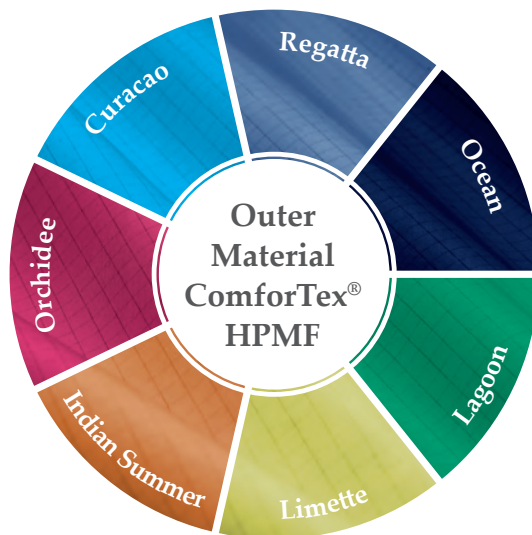

ComforTex[®]-HPMF

The demands for disinfection in the healthcare industry are continually growing. This has created new challenges for X-ray protective clothing and its performance, especially in regards to chemical resistance.

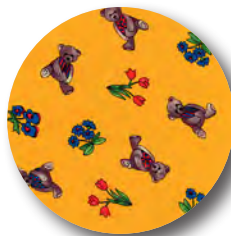

Therefore, MAVIG uses a high performance medical fabric in accordance to EN 13795 as an outer cover for all radiation protective clothing. Due to its special properties, the material offers a high barrier function, making it impermeable to infectious agents, as well as their carrier mediums, like liquids or particles. The texture repels liquids and counteracts the growth of microorganisms at the surface. The special microfiber offers a nearly complete absence of particles.

In addition to the assured reliability of the radiation protective inlay, MAVIG aprons with ComforTex[®]-HPMF provide a positive wearing experience and natural feel.

Colour Sortiment*:

In addition to our standard colours, our "Teddy" pattern is available for many products in our patient protection line. It can also be ordered for further products upon special request.

** Please beware that the colour samples illustrated above may differ slightly from the original fabric when printed.*

Quality „Made in Germany“ Since 1921

1921

1960

1972

1985

For over 90 years, MAVIG has been a specialist for personal protection in high risk work environments

What started in 1921 in Leipzig with protective aprons for welders and medical personnel has become a world leader in X-ray protection and medical suspension systems for hospitals and clinics.

In subsequent decades, the brand MAVIG established itself as a global success in the field of radiation protective clothing and equipment. After the war, the company's headquarters and manufacturing facilities were moved to Munich.

Even then, the family held company has been striving to create a model of today's corporate philosophy: The customer is the focal point and their satisfaction is top priority.

In 1999, the brand „MAVIG“ and company name become one.

Since 2006 MAVIG has been developing and distributing the world's first applicable confocal laser scanning microscope – VivaScope®. For the first time, this system allows for an optical biopsy in real time.

In 2013, the company Pausch GmbH, with more than eight decades of experience in producing high-end devices such as tables, columns, and ceiling systems, became the newest member of the MAVIG group.

Even today MAVIG is still a fully independent and family owned company.

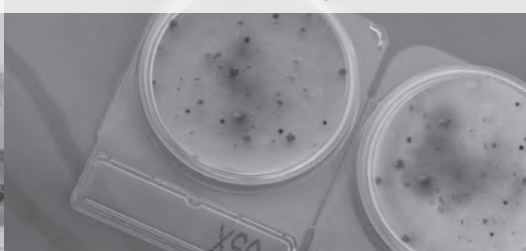

History

1921 – The later MAVIG GmbH was started in Leipzig under the name F. Walter Hänel GmbH, soon specializing in radiation and welder protection under the brand „MAVIG“.

Accountability

All MAVIG products are tested over a complete life cycle and are only released after certification.

MAVIG emphasizes long-term partnerships based on trust and cooperation with our suppliers and customers worldwide. Such relationships guarantee a quality control through the whole supply chain.

Substance

Extensive material research and testing ensure a healthy environment for the user, and best ecological and toxicological safety.

We trust in a careful selection of materials, high quality standards, strict control of processes, and training of our employees.

From Munich to the World

Today, with Offices in: Rochester • Paris • The Hague • Munich (Headquarters) • Stockholm • Beirut • Beijing

MAVIG is certified according to EN ISO 13485:2012. MAVIG products are certified in accordance with the applicable CE standards: EU Directive 89/686/EEC (Personal Protective Equipment) and/or 93/42/EEC for medical products. Most MAVIG products are UL-listed. Numerous additional international certificates are available.

Research and Development

Our company does not just see itself as a leader in quality and innovation in X-ray protection and systems solutions, but also in confocal laser scanning microscopy.

The MAVIG product range is known for being innovative, varied, and thoroughly tested. Our ambition and motivation lies in the research and development of future, market orientated products.

Quality Management and Certification

Our product applications require the highest reliability and quality. To ensure such quality and to optimization of improvement, MAVIG's quality management system is in accordance to EN ISO 13485:2012 for medical devices.

It is our first priority to offer our customers high quality products free of defects and in a timely manner. In addition, MAVIG strives for an efficient and fair relationship with our suppliers as they are instrumental for the quality of products.

MAVIG products are designed, manufactured, and sold under strict compliance with all laws, regulations, and standards.

Every product is tested for safety and reliability under higher and more stringent requirements than generally specified by law. This helped to build the reputation for quality and customer orientation, which MAVIG enjoys worldwide.

MAVIG offers a Complete Product Portfolio

MAVIG: One Source

MAVIG's product portfolio is focused on personal and on-site x-ray protection, as well as fixtures for medical equipment.

This combination allows us to offer solutions optimized to the needed application.

Because of this, you will encounter MAVIG products in hospitals and medical facilities all over the world.

The industry's major fluoroscopic systems are equipped with our proven, large suspension systems for monitors and the modular Portegra2 suspension system for devices like ceiling suspended shields, which dramatically reduce radiation exposure for the user.

Mobile radiation protection barriers, as well as adaptable table-mounted shields for lower body protection further provide the required work-safe environment.

Expertise and competence in fundamental research, product development, and manufacturing are all found in MAVIG.

That means you can trust our certified products, tested for safety and reliability, with the seal "Made in Germany".

 **** X-LARGE – recommended for a chest measurement of 124 cm - 150 cm (special size)

THYROID PROTECTION, SLEEVES

Thyroid Shield RA614

The thyroid shield firmly attaches to the apron with snap buttons.

Our thyroid gland and sternum protection proves itself with first-class design and ideal fit, while keeping in mind all aspects of radiation protection. An uncomplicated hook & burr fastener, optionally exchangeable, gives plenty of range for individual adjustments.

X-Ray Protective Material	NovaLite X-ray protective material
Lead Equivalent (Pb)	Standard: Pb 0.50 mm
Collar Sizes	32 - 48 cm

Note: *Special orders can be made for printed or embroidered logos. Custom collar sizes can also be accommodated.*

Outer Material / Colours

ComforTex® HPMF, available in:

Colours	Colour Codes
Curacao	1
Orchidee	2
Regatta	3
Indian Summer	4
Limette	5
Ocean	7
Lagoon	8

Optionally Available with

Embroidery (single line text)
(additional line)

Hygienic Cover (colour Ocean)

In order to keep up with the hygienic standards, it is recommended to order the collar with a special washable hygienic cover made of ComforTex® MF.

Exchangeable Hook & Burr Fastener

Thyroid shield with exchangeable hook & burr fastener.

Protection (Pb)	Description	Size	Article-No.
0.50 mm	With hook & burr fastener	universal	RA614 + <i>Colour Code</i>
0.50 mm	With exchangeable hook & burr fastener	universal	RA614 + <i>Colour Code</i> + AK
-	Replacement hook & burr fastener	-	RA614AKV
-	Hygienic cover	universal	RA614F

Sleeves (optional)

Button-on Sleeve

All models, except RA650, can be optionally ordered with sleeves to extend protection. Aprons with sleeves reduce radiation exposure occurring on the side, especially to an exposed shoulder joint.

X-Ray Protective Material

Novalite X-ray protective material

Lead Equivalents (Pb)

Standard: Pb 0.25 mm
Upon request: Pb 0.35 mm or Pb 0.50 mm

To ensure good mobility during the daily work routine, MAVIG recommends the standard lead equivalent.

Fastening Types

MAVIG offers sleeves, which are either permanently sewn on or attached with snap buttons. You can select just the right or left sleeve, or a pair.

Colour, size, and X-ray protective material of the sleeves are matched to the apron ordered.

Sizes	Sleeve Lengths	▶ Codes (Fastening Type)
XS	21 cm	1 (sewn-on)
S	23 cm	2 (button-on)
M	25 cm	
L	26 cm	
XL	29 cm	

Sewn Sleeve

Protection (Pb)	Type	Size	Article-No.
0.25 mm	left	XS - XL	RA631-SLL + <i>Fastening Code</i>

X-RAY PROTECTIVE DRAPES

Reusable X-Ray Protective Drapes

ST-FS5AMM for femoral access

ST-RZ5AMM for radial access

Our reusable covers have been ergonomically formed to provide excellent protection, while being as compact as possible for patient comfort.

Special attention has also been made to their application, such as the special cutout of the femoral cover for the femoral port, and the gentle slope of the right side of both covers for unobstructed imaging.

With the sterile covers, the protective drapes can be placed on top of the patient drape, allowing for quick placement or removal, and position reference.

Protection (Pb)	Description	Article-No.
0.50 mm	X-ray protective drape with cutout for femoral access <i>Includes 50 sterile covers (STEA-FSAM)</i>	ST-FS5AMM
0.50 mm	X-ray protective drape for radial access <i>Includes 50 sterile covers (STEA-RZAM)</i>	ST-RZ5AMM

Lead Free Disposable X-Ray Protective Drapes

 <p>AS1001 „Angio“</p>	 <p>AS1005 „Multi“</p>	<p>The application-specific designs of Radionex drapes provide perfect protection for the physician without influencing the way they work. In addition, special adhesive strips on the backside of the drape allow for easy re-positioning to make sure it does not conflict with the imaging field.</p> <p>The outer material of Radionex is made of an absorbent fabric to keep fluids such as blood and saline. These features make Radionex an easy addition to any physician’s radiation protection system, without noticing any difference in clinical procedure.</p> <p>The drapes are available in four different forms, each dedicated to a specific application to maximize protection.</p> <p>Additionally, the drapes can be ordered in three different protection levels (low, medium, and high), depending on clients’ needs.</p>

PATIENT X-RAY PROTECTION

Ovarian Protection RP679 with Belt

Note:

One set contains three sizes of protective shields and a stretch belt (with hygienic casing) which can be tightened.

The patient protection RP679 protects the ovaries of your female standing patients during X-rays in medical diagnostics. The elastic stretch belt with snap buckle guarantees easy putting on and taking off and a comfortable size adjustment.

Lead Rubber Singleply Material AZ187

The high quality, robust lead rubber singleply material with easy to clean coating on the outside and fabric inlay is frequently used in the exposure technique, e.g. as cassette covers. The visible colour of the outside is Medico-white.

Material / Features

Thickness and weight of the material can vary +/- 10 %. The material is uncomplicated to handle and can be easily cut to the size of a cassette plate or other required sizes by the client. Pieces trimmed by MAVIG are subject to a surcharge.

AZ187-99 in rolls with 90 cm width, edges not trimmed, minimum quantity 0.50 m.

Scattered Radiation Grid Bridge

Parallel and tunnel grids serve to reduce scatter radiation, which considerably impairs image quality because of inadequate contrast reproduction.

Basics for Your Product Choice

1. Size
2. Lines per cm
3. Ratio
4. Size 35.6 x 43.2 cm: the cassette drawer can be ordered on the short or the long side of the grid. For all other sizes, the drawer is on the short side.

Focused grids are available upon request.

Size	Orientation	Linien per cm	Ratio	Article-No.
35.6 x 43.2 cm	parallel	30	R 6:1	AZTR3543A6
35.6 x 43.2 cm	parallel	30	R 8:1	AZTR3543A8

General Notice

All sales transactions are done in EURO. Unless otherwise stated, prices of goods include packing, and are FCA MAVIG, Munich (Incoterms 2010). In order to protect the interest of the purchaser, we recommend to obtain insurance to cover against loss, damage, and or theft of goods in transit.

Returned merchandise will not be accepted without prior written notice. Any merchandise received by MAVIG without written authorization shall be refused and returned to sender.

Special orders are sold on a non-refundable basis. Aprons ordered without colour specification will be supplied in the standard colour listed for each model. All people authorized to use MAVIG products should be trained in their correct use and storage, as well as the dangers involved in exposure to radiation. The proper selection and use of MAVIG products are the sole responsibility of the purchaser. The purchase must only be made by a person competent in determining the requirements of X-Ray protection and the particular applications in which they will be used.

No warranty or guarantee, either expressed or implied, is extended to cover personal injury or damage which may result due to improper use, storage, handling, or unauthorized use of MAVIG products. This warranty is in lieu of all warranties expressed or implied, including warranties of merchantability and fitness for purpose.

We refer to the general terms of business of MAVIG GmbH.

Right to technical changes for the products or content of the catalogue is reserved.

Personal X-Ray Protection – Made to Measure

This data sheet has been developed in order to assist with taking correct measures for tailor-made aprons. Before ordering a tailor-made apron, please double check with our customer service to see if there is not a suitable standard size in our extensive product range.

Please always consider the following points in order to achieve the best protection:

- Measure precisely: tape should be snug, but not restrictive
- In order to obtain correct values, it is not possible to measure oneself. The measures always have to be taken by a second person. While being measured you should stand straight with your arms at your sides.
- According to RöV and DIN EN 61331-3 the front of the body should be covered from the lowest point of the neck down to the knee caps. MAVIG recommends to measure to the point underneath the knees for maximum safety.
- All of the measurements below are important, regardless if a coat, apron, or costume is requested

Please fill in this chart completely.

1 _____ cm **Width of Back**

Measured across the back from armpit to armpit, while arms are down and close to body.

2 _____ cm **Breast Width**

Measured horizontally around the body at the widest point of the chest.

3 _____ cm **Waist Width**

Measured snug around the waist, but not restrictive.

- Women: at the slimmest point of the waist
- Men: slightly below the navel

4 _____ cm **Waist Level**

Measured from the middle of the shoulder to the waist.

- Women: to the slimmest point of the waist
- Men: to a point slightly below the navel

5 _____ cm **Hip-/Bottom Width**

Measured horizontally around the body at the widest point of the hip/bottom.

6 _____ cm **Length of Apron / Coat**

Measured from the middle of the shoulder to the lower edge of the apron / coat.

7 _____ cm **Length of Costume Skirt**

Measured from waist level to the lower edge of the skirt.

8 _____ cm **Total Body Height**

9 Model _____, Pb Value Front _____ mm
